Seeking creative computational problem-solving post as either a:  
**Knowledge-Engineer, Scientific/Research-Programmer/Systems-Analyst/Architect, Scientist, Multi-disciplined Research/Software-Engineer.**

**Furthering knowledge/experience-with Artificial-Intelligence/Modeling&Simulation techniques, through stimulating peer interaction on challenging projects.**

**Particular interest in: Knowledge-Based-Modeling&Simulation Environments, Assisted Problem-Solving Environments.** Knowledge-(Representation/Reasoning/Mngt) for cooperative Scientific modeling [e-Science, Semantic(Web/Grid)Services] via multi-use Model-Based-Reasoning/ descriptive (layer of logic) to use pre-constructed applications&data.

**Prefer:** dynamic(event-driven)language/environments, RuleBased(shells), flexible KnowledgeRepresentation&Reasoning. Having a Lisp (like) language, use of AI techniques& a science-based domain, would do it for me.

**Experience Summary:** Modeling&Simulation and AI work has helped my design and algorithmic skills. Growing up around UIUC, using networked computers (*PLATO*) since early grade-school, early tech-groups (sci/eng/CS), a lab job from HS- through both undergrad-degrees, then work in & around super-computing, has set my standards for what is a good/interesting system, quite high. I get something out of all of my work, yet think I can do more. So I continue to look for places that I can enact (*at least parts of*) my vision. I prefer scientific applications, but the ability to push the norm with innovative applications wins out in any domain. If your IT dept. already has the skills for what you want done, I probably shouldn't work for you. I should be helping you with a multi-disciplined problem, by leveraging my varied background. I am a uniting force as both a knowledge worker&knowledge-engineer. If it isn't clear, I don't *just* write code. If you just want code written and no problem solved along the way; then I can only do that short-term.
